# What Arbil Does

- ARBIL is an application for manually creating and organising metadata.
  - It is not designed to automate the metadata creation process.
  - There are other tools designed for more than 1000 or so metadata records.
- All editing within Arbil is done offline.
- Metadata structures can be created, viewed and edited.
- Multiple metadata files can be edited at the same time.
- The metadata to be arranged into corpus trees.
- The local metadata tree can be searched with multiple parameters.
- The data files can be launched in the associated applications such as ELAN or Media Players.
- Many metadata files can be bulk edited in a single table.
- With the exception of accessing the remote archive, all features are available offline such as in remote field sites.
- You can enter the data as it becomes available, there is no mandatory order.

# Metadata Formats

- Both IMDI and Clarin metadata formats are supported.
- Other XML formats can potentially be supported by the use of custom templates or schema files.

# Metadata Formats

IMDI (ISLE Meta Data Initiative) is a metadata format for linguistic data

- Has been around for about a decade
- Targeted towards multimodal / multimedia
- Has a single schema file with fixed metadata fields and optional key fields
- Is used for instance throughout the Language Archive in Nijmegen and associated archives

Clarin metadata is a flexible format with ISOCAT

- It is a more recent metadata format
- Each profile has its own schema files
- Developed as a part of the Clarin EU project
- Can be adapted to suit specific project needs
- The metadata fields and layout are customisable

# The User Interface

## Remote Corpus

View and import metadata from remote servers

## Local Corpus

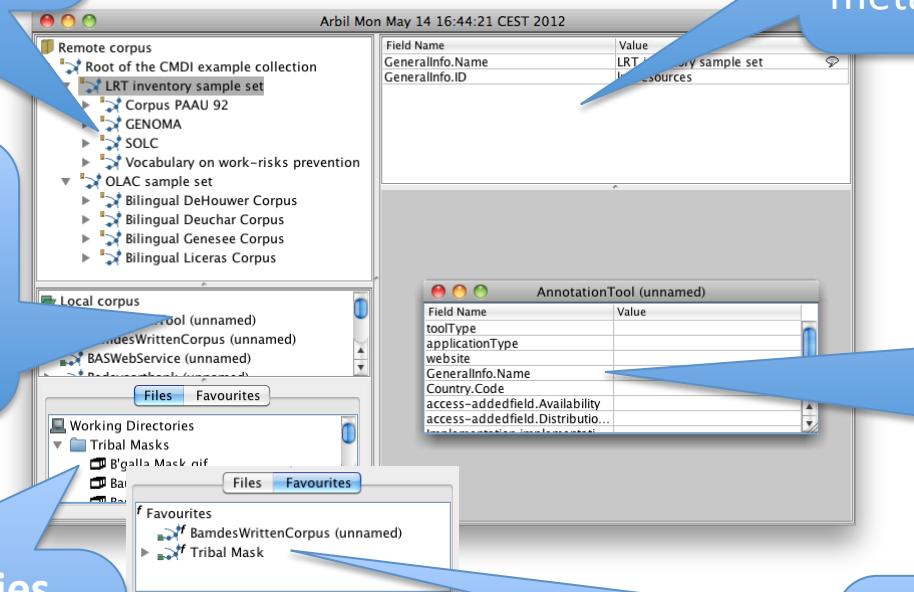

All newly created metadata will be created here

## Working Directories

Your data files can be browsed and associated with new metadata from here

Clarin Tutorial Utrecht

4th Jan, 2014

## Preview Table (optional)

The currently selected metadata.

## Main Work Area

Multiple tables of metadata can be viewed and edited

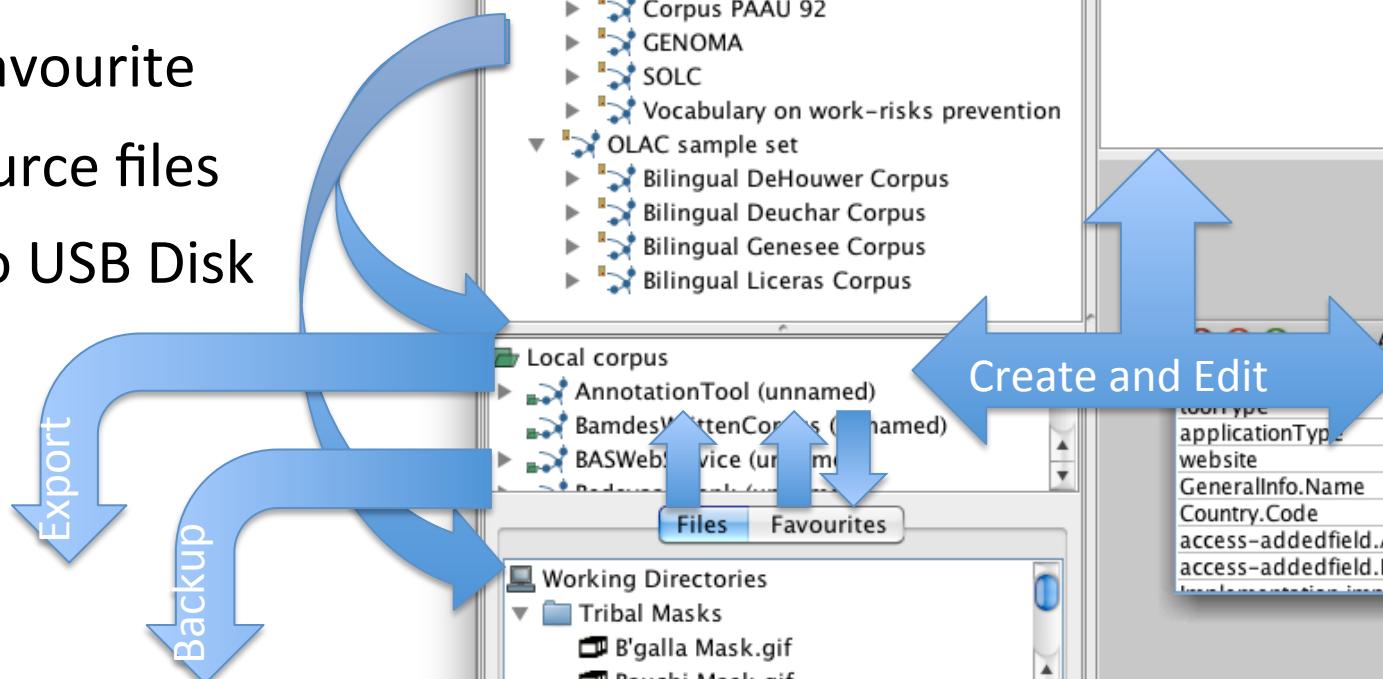

## Favourites

Frequently used metadata is saved here for easy replication

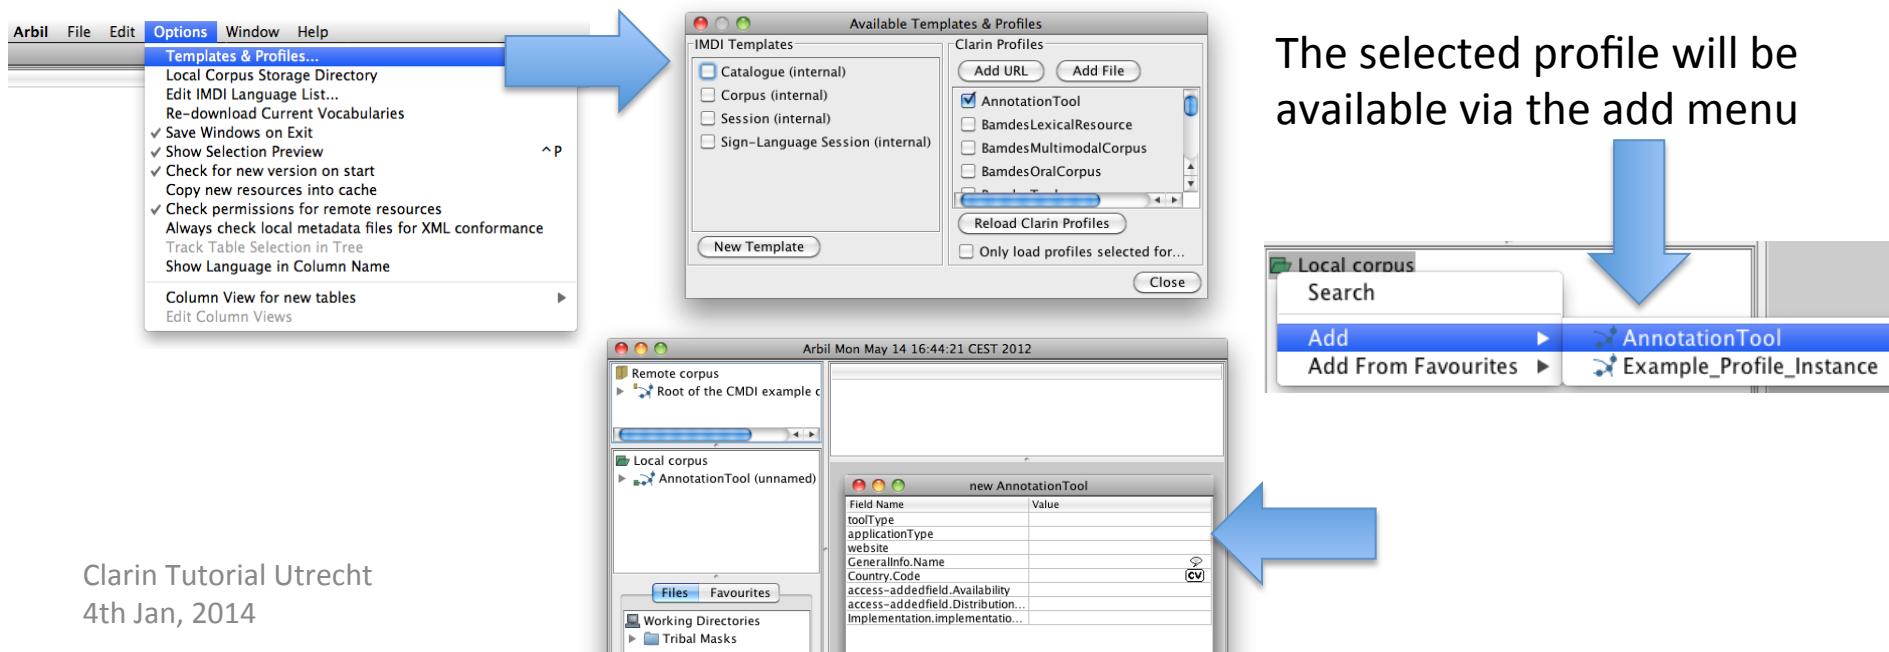

- Create and edit metadata
- Import for offline use
- Import as favourites
- Insert from favourites
- Save as favourite
- Add resource files
- Backup to USB Disk
- Export

# Workflow

# Configuring ARBIL

- When Arbil is first started, you will be asked which metadata format to use.
- Depending on how you intend to use ARBIL you will want to select IMDI templates or Clarin profiles.
- You can change later in the templates & profiles dialogue.
- This can also be preconfigured by your system administrator.

# Metadata Display

- The metadata is displayed in tables and trees, which allow an overview of the metadata and the ability to populate and update many metadata sections in bulk.

Metadata files are shown in the tree

Multiple metadata files or subsections can be viewed in a single table

metadata will be highlighted in red

metadata are shown as separate subnodes

# Table Views

- When multiple metadata files or subsections are viewed in a single table, they are each shown in a separate row.
- When a table shows a single metadata file or subsection, it is shown in the long view.
- Individual fields can be edited in the long field view, which allows each field to be edited sequentially.

The screenshot displays two windows side-by-side, illustrating different table views of metadata.

**Left Window (Corpus PAAU 92):** This window shows a table view of metadata fields. The columns are "Field Name" and "Value". The visible rows include:

Field Name	Value
LrtCommon.ResourceName	Corpus PAAU 92
LrtCommon.Institute	Institut Universita
LrtCommon.ResourceType	Written Corpus
LrtCommon.Description	The electronic v
LrtCommon.ContactPerson	Sergi Torner <se
LrtCommon.Format	
LrtCommon.MetadataLink	<a href="http://gilmere.up">http://gilmere.up</a>
LrtCommon.Publications	
LrtCommon.ReadilyAvailable	true
LrtCommon.ReferenceLink	<a href="http://www.iula.u">http://www.iula.u</a>
LrtDistributionClassification.Non...	false
LrtDistributionClassification.Usa...	false
LrtDistributionClassification.Mod...	false
LrtDistributionClassification.Othe...	
LrtIPR.EthicalReference	
LrtIPR.LegalReference	
LrtIPR.LicenseType	
LrtIPR.Description	

**Right Window (LrtCommon.Description in Corpus PAAU 92):** This window shows a long view of the "LrtCommon.Description" field. The title bar says "LrtCommon.Description in Corpus PAAU 92". The content area contains the following text:

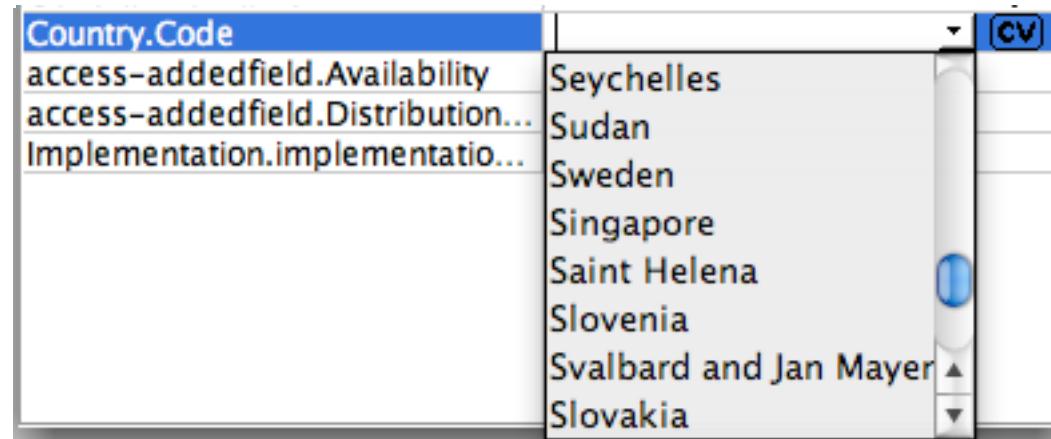

short clarifying description of the resource  
The electronic version of the book "Corpus PAAU 1992: Descriptive Studies, Texts and Vocabulary" includes the texts that have been object of analysis in this project as well as the vocabulary lists that make up the Corpus 92.

At the bottom right are "Previous" and "Next" buttons.

# Controlled Vocabularies

- Clarin vocabularies are read from the schema file.
- IMDI vocabularies are read from an XML file.
- Both are provided as dropdown lists in the table when editing.

# Using Favourites

- Favourites are snippets of prefilled metadata instances
- New metadata instances can be created from them, leaving only the specific details to be edited
- Either the entire favourite can be used or just the desired sections added to existing metadata

The screenshot shows the CLARIN interface. On the left, there's a sidebar with a tree view under "Local corpus" showing "An Instantiated Sample Favo". Below it are tabs for "Files" and "Favourites", with "Favourites" selected. Under "Favourites", there are two items: "Sample Favourite" and "Tribal Mask". On the right, a detailed view window titled "An Instantiated Sample Favourite" displays a table of metadata fields and their values:

# Creating Metadata for a Resource

- Create a metadata instance
- Add a data file
- Add a metadata subsection
- Add a field

The screenshot shows the CLARIN interface with two main panes. The left pane is a file tree titled "Local corpus". It contains a folder named "Example Instance" which has two items: "Turkey" (represented by a diamond icon) and "B'galla Mask.gif" (represented by a document icon). Below the file tree are tabs for "Files" and "Favourites", and a section for "Working Directories" showing a folder named "Tribal Masks" containing "B'galla Mask.gif". The date "4th Jan 2014" is also listed. The right pane is a "new LrtInventoryResource" editor. It is a table with "Field Name" and "Value" columns. The table includes fields like LrtCommon.ResourceName (Value: Example Instance), LrtCommon.Format (Value: Example Format, highlighted in blue), and LrtCommon.MetadataLink (highlighted in blue). Other visible fields include LrtCommon.ResourceType, LrtCommon.Description, LrtCommon.ContactPerson, LrtCommon.Format, LrtCommon.Publications, LrtCommon.ReferenceLink, LrtDistributionClassification.Other..., LrtIPR.EthicalReference, LrtIPR.LegalReference, LrtIPR.LicenseType, LrtIPR.Description, and LrtIPR.ContactPerson.

# Searching the Metadata

- Searches in Arbil are tree based.
- Multiple search parameters can be entered.
- The search results are shown in a standard table with the usual editing facilities.

# Installing Arbil

- There is a link to ARBIL on the MPI website  
<http://tla.mpi.nl/tools/tla-tools/arbil/>
- Providing you already have Java installed the webstart version is the fastest way to start
- Alternately there are installers for Windows, Mac and Ubuntu (Debian).
- The manual and user guide are also available for download on the same page

The screenshot shows the 'Arbil' page on the The Language Archive website. The header includes the Max Planck Institute for Psycholinguistics logo, a stylized mountain icon, and a world map. The main navigation menu has links for Home, Team, Projects, Tools, Resources, Events, Forums, and Contact. The 'Tools' section is active, showing 'Arbil' as a sub-section under 'TLA Tools'. The 'Arbil' page itself has sections for 'More information...', 'Release history...', 'System requirements...', and 'How to cite Arbil...'. It features a 'Download' section with links for 'Latest stable version' (via webstart, Windows installer, Debian Linux package, Mac installer), 'Other versions', and a screenshot of the Arbil application interface. A sidebar on the right contains a search bar, a 'Logged in as' section with the email petwit@mpi.nl, and links for 'My profile' and 'Logout'. At the bottom, there's information about the Max Planck Institute for Psycholinguistics, street address, mailing address, and social media links.
