## GrETEL

### What is *GrETEL*?

Greedy Extraction of Trees for Empirical Linguistics

GrETEL is a query engine in which linguists can use a natural language example as a starting point for searching a treebank with limited knowledge about tree representations and formal query languages. By allowing users to search for constructions which are similar to the example they provide, we hope to bridge the gap between traditional and computational linguistics.

# SELECTION MATRIX

## GrETEL for CGN (v1.2)

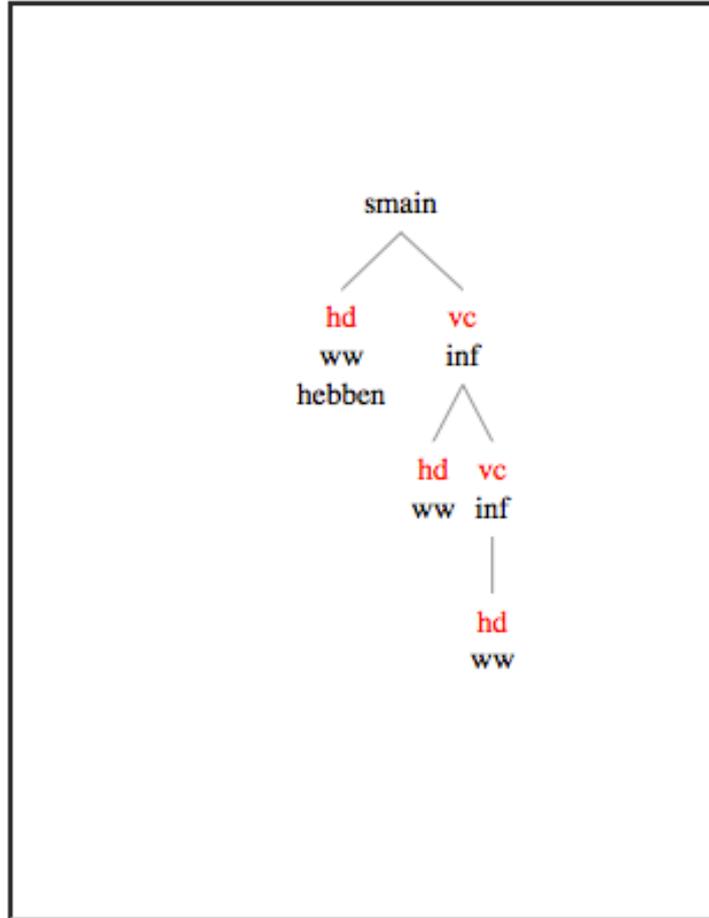

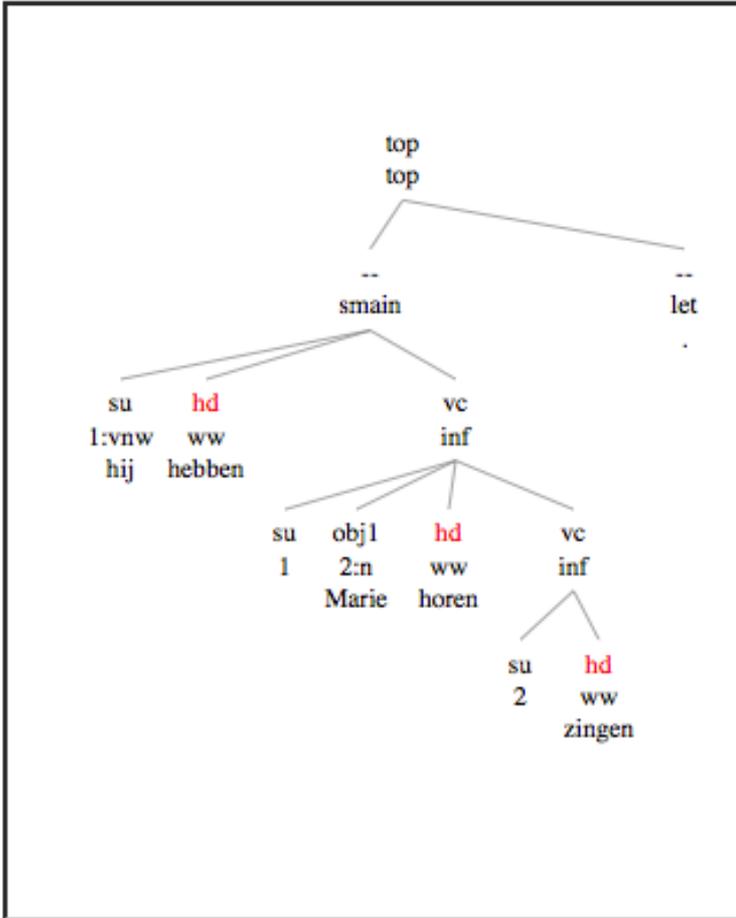

Please indicate the relevant parts of the sentence

<b>sentence</b>		Hij	heeft	Marie	horen	zingen	.
<b>relevant nodes</b>	<b>pos</b>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>
	<b>extended pos</b>	<input type="radio"/>					
	<b>lemma</b>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
	<b>token</b>	<input type="radio"/>					
<b>optional nodes</b>		<input checked="" type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>

# SELECTION GUIDELINES

## GUIDELINES

- **pos**: Short part-of-speech tag (e.g. noun, verb, prep) [[list of all pos tags](#)]
- **extended pos**: Long part-of-speech tag. Besides the part-of-speech, the tags contain more detailed information on person, gender, number, tense, agreement etc. For example: N(soort,mv,basis), WWW(pv,tgw,ev), VNW(pers,pron,nomin,vol,2v,ev). [[list of all pos tags](#)]
- **lemma**: Word form that generalizes over inflected forms. For example: *zin* is the lemma of *zin*, *zinnen*, and *zinnetje*; *gaan* is the lemma of *ga*, *gaat*, *gaan*, *ging*, *gingen*, and *gegaan*. Lemma is case insensitive (except for proper names). Note that the short part-of-speech tag will be taken into account as well.
- **token**: The exact word form. This is a case sensitive feature. Note that the short part-of-speech tag and the lemma will be taken into account as well.

# XPATH GENERATOR

**XPath query** generated from the input example. You can adapt it if necessary. If you are dealing with a long query, the [XPath beautifier](#) might come in handy.

[[download original XPath](#)]

```
//node[@cat="smain" and node[@rel="hd" and @pt="ww" and @lemma="hebben"] and
node[@rel="vc" and @cat="inf" and node[@rel="hd" and @pt="ww"] and node[@rel="vc" and
@cat="inf" and node[@rel="hd" and @pt="ww"]]]]
```
